

UI WALKTHROUGH · TECHNICAL FEASIBILITY SUBMISSION

BuildCycle + Procore

The response round trip, as the user experiences it: a Procore RFI or submittal arrives in BuildCycle, routes to the responsible reviewer, and the approved answer posts back to Procore as a formal action — official reply or approver response — with the file attached. Captured from the live integration against a Procore test project.

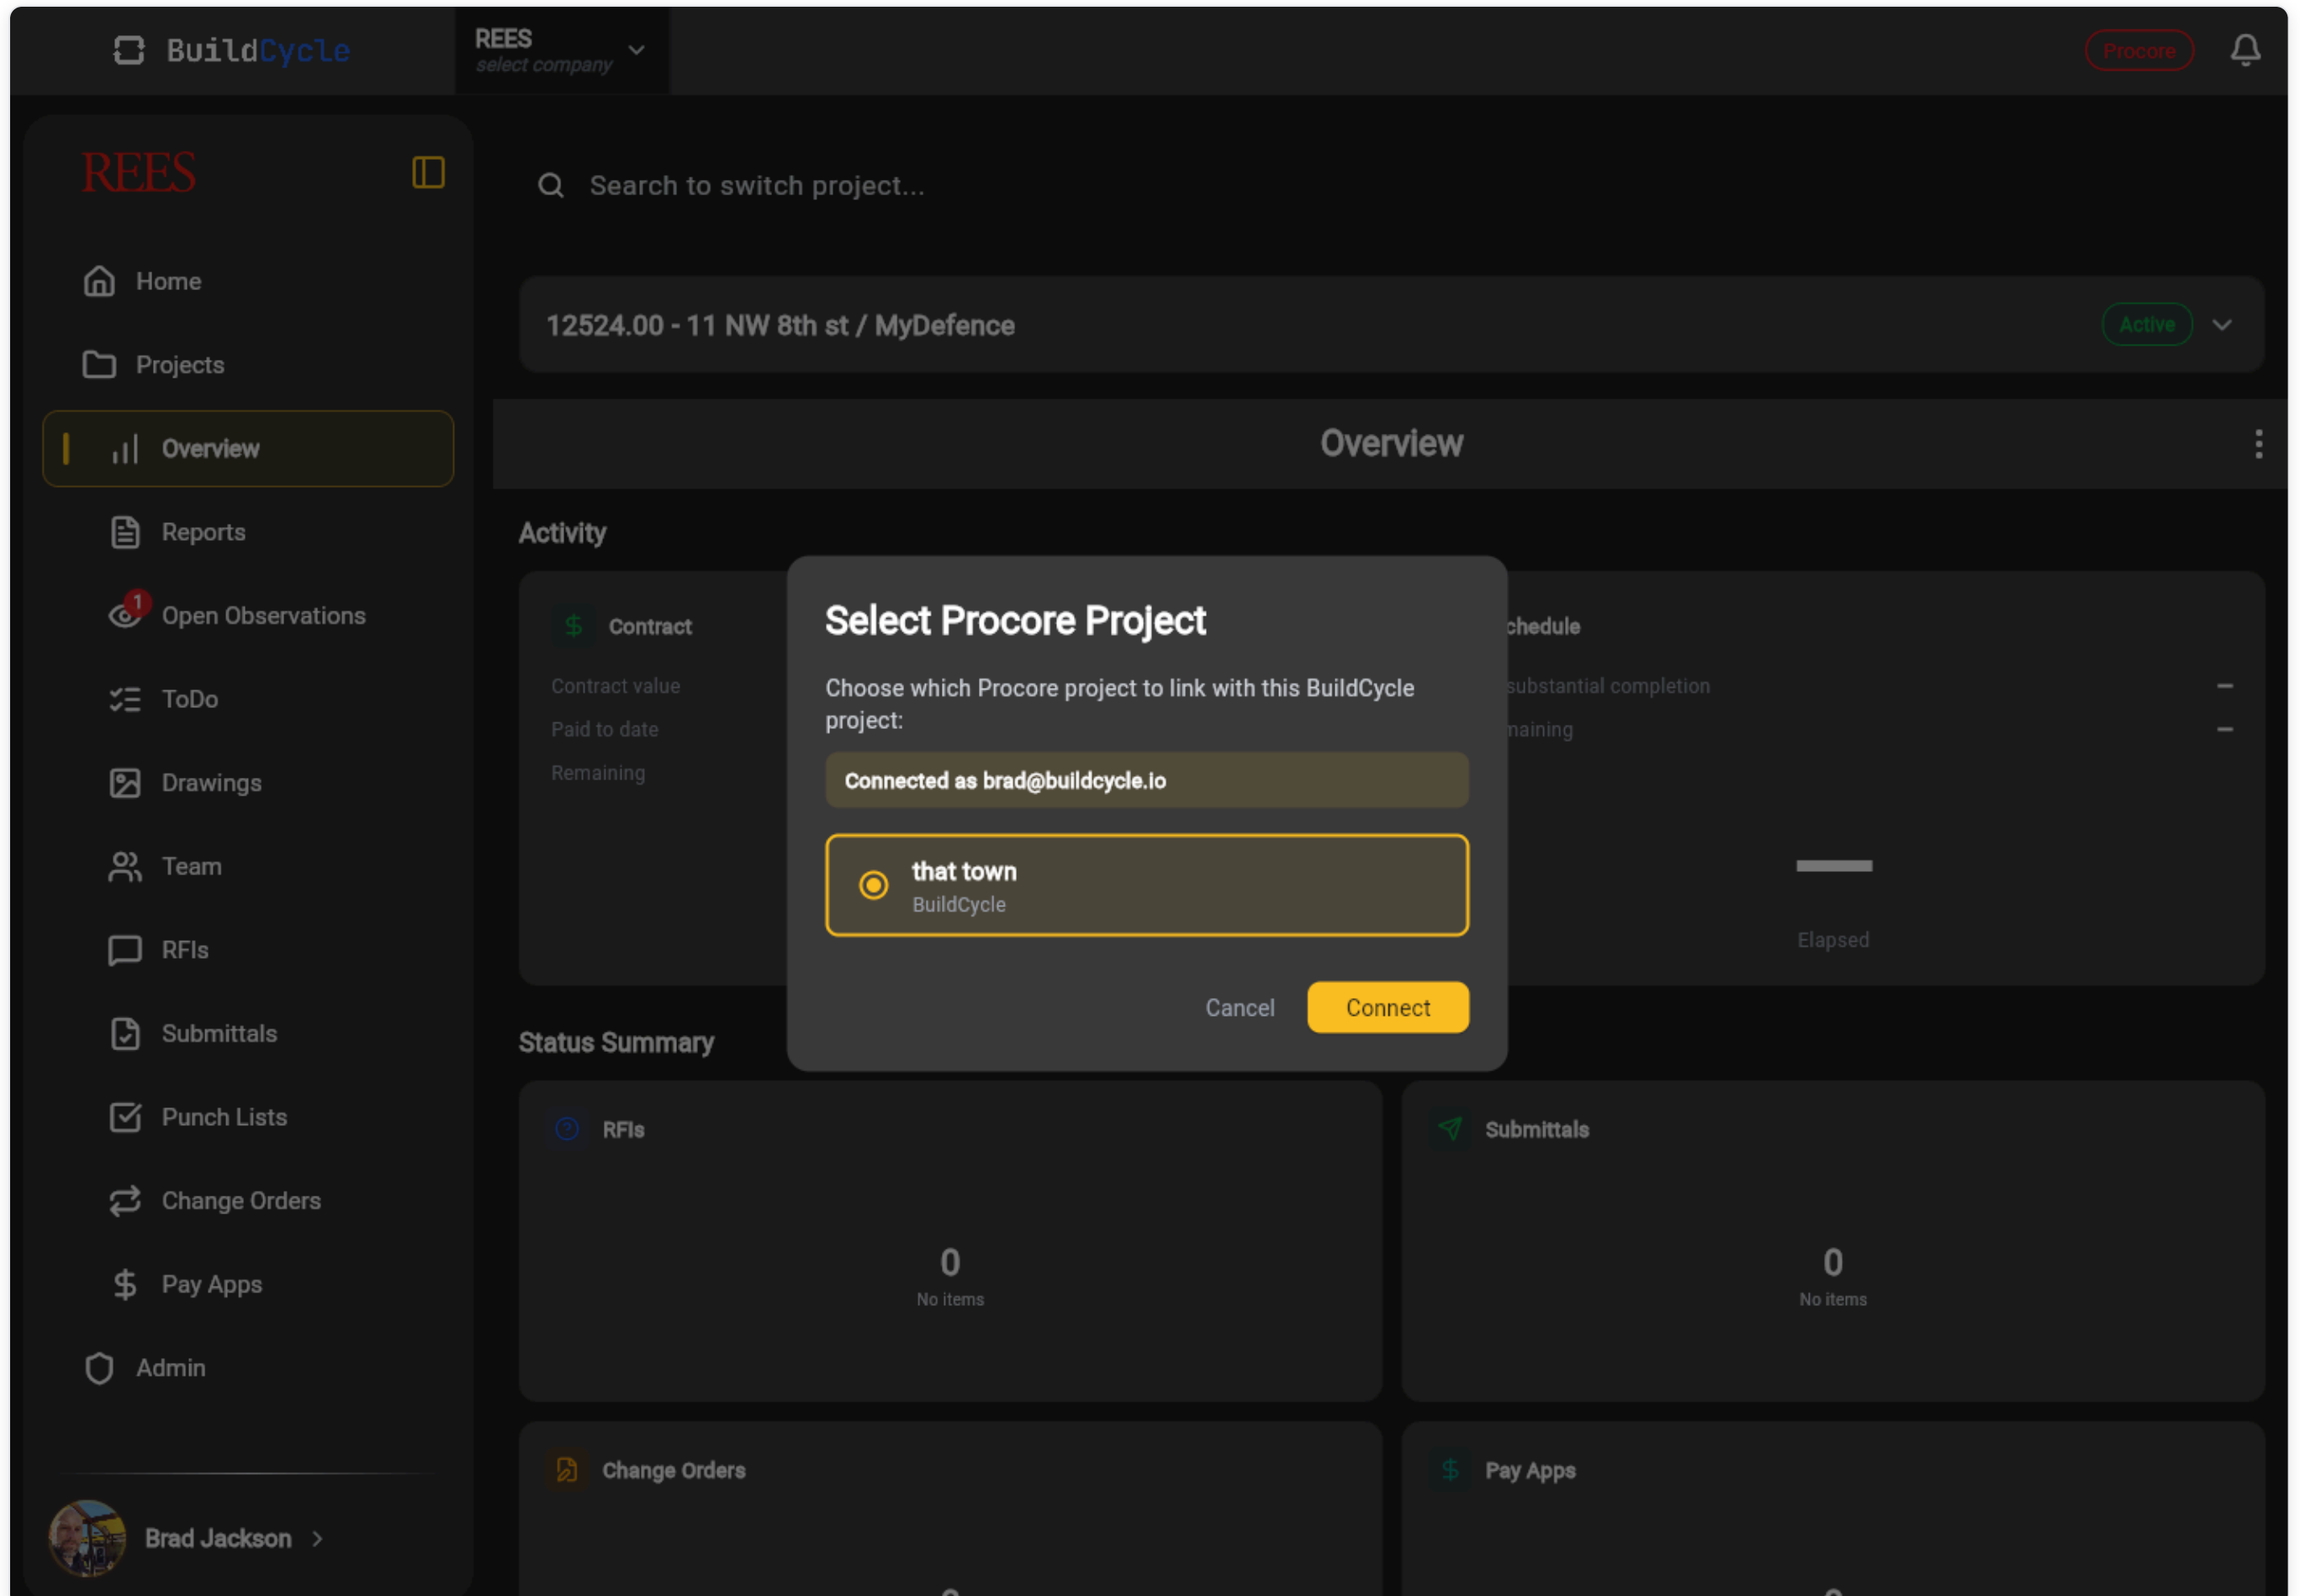

Part 1 — RFI round trip · Steps 1–5: connect → synced items → route → respond → official reply in Procore

Part 2 — Submittal round trip · Steps 6–7: formal review action → approver response & ball-in-court in Procore

STEP 1 Connect the project

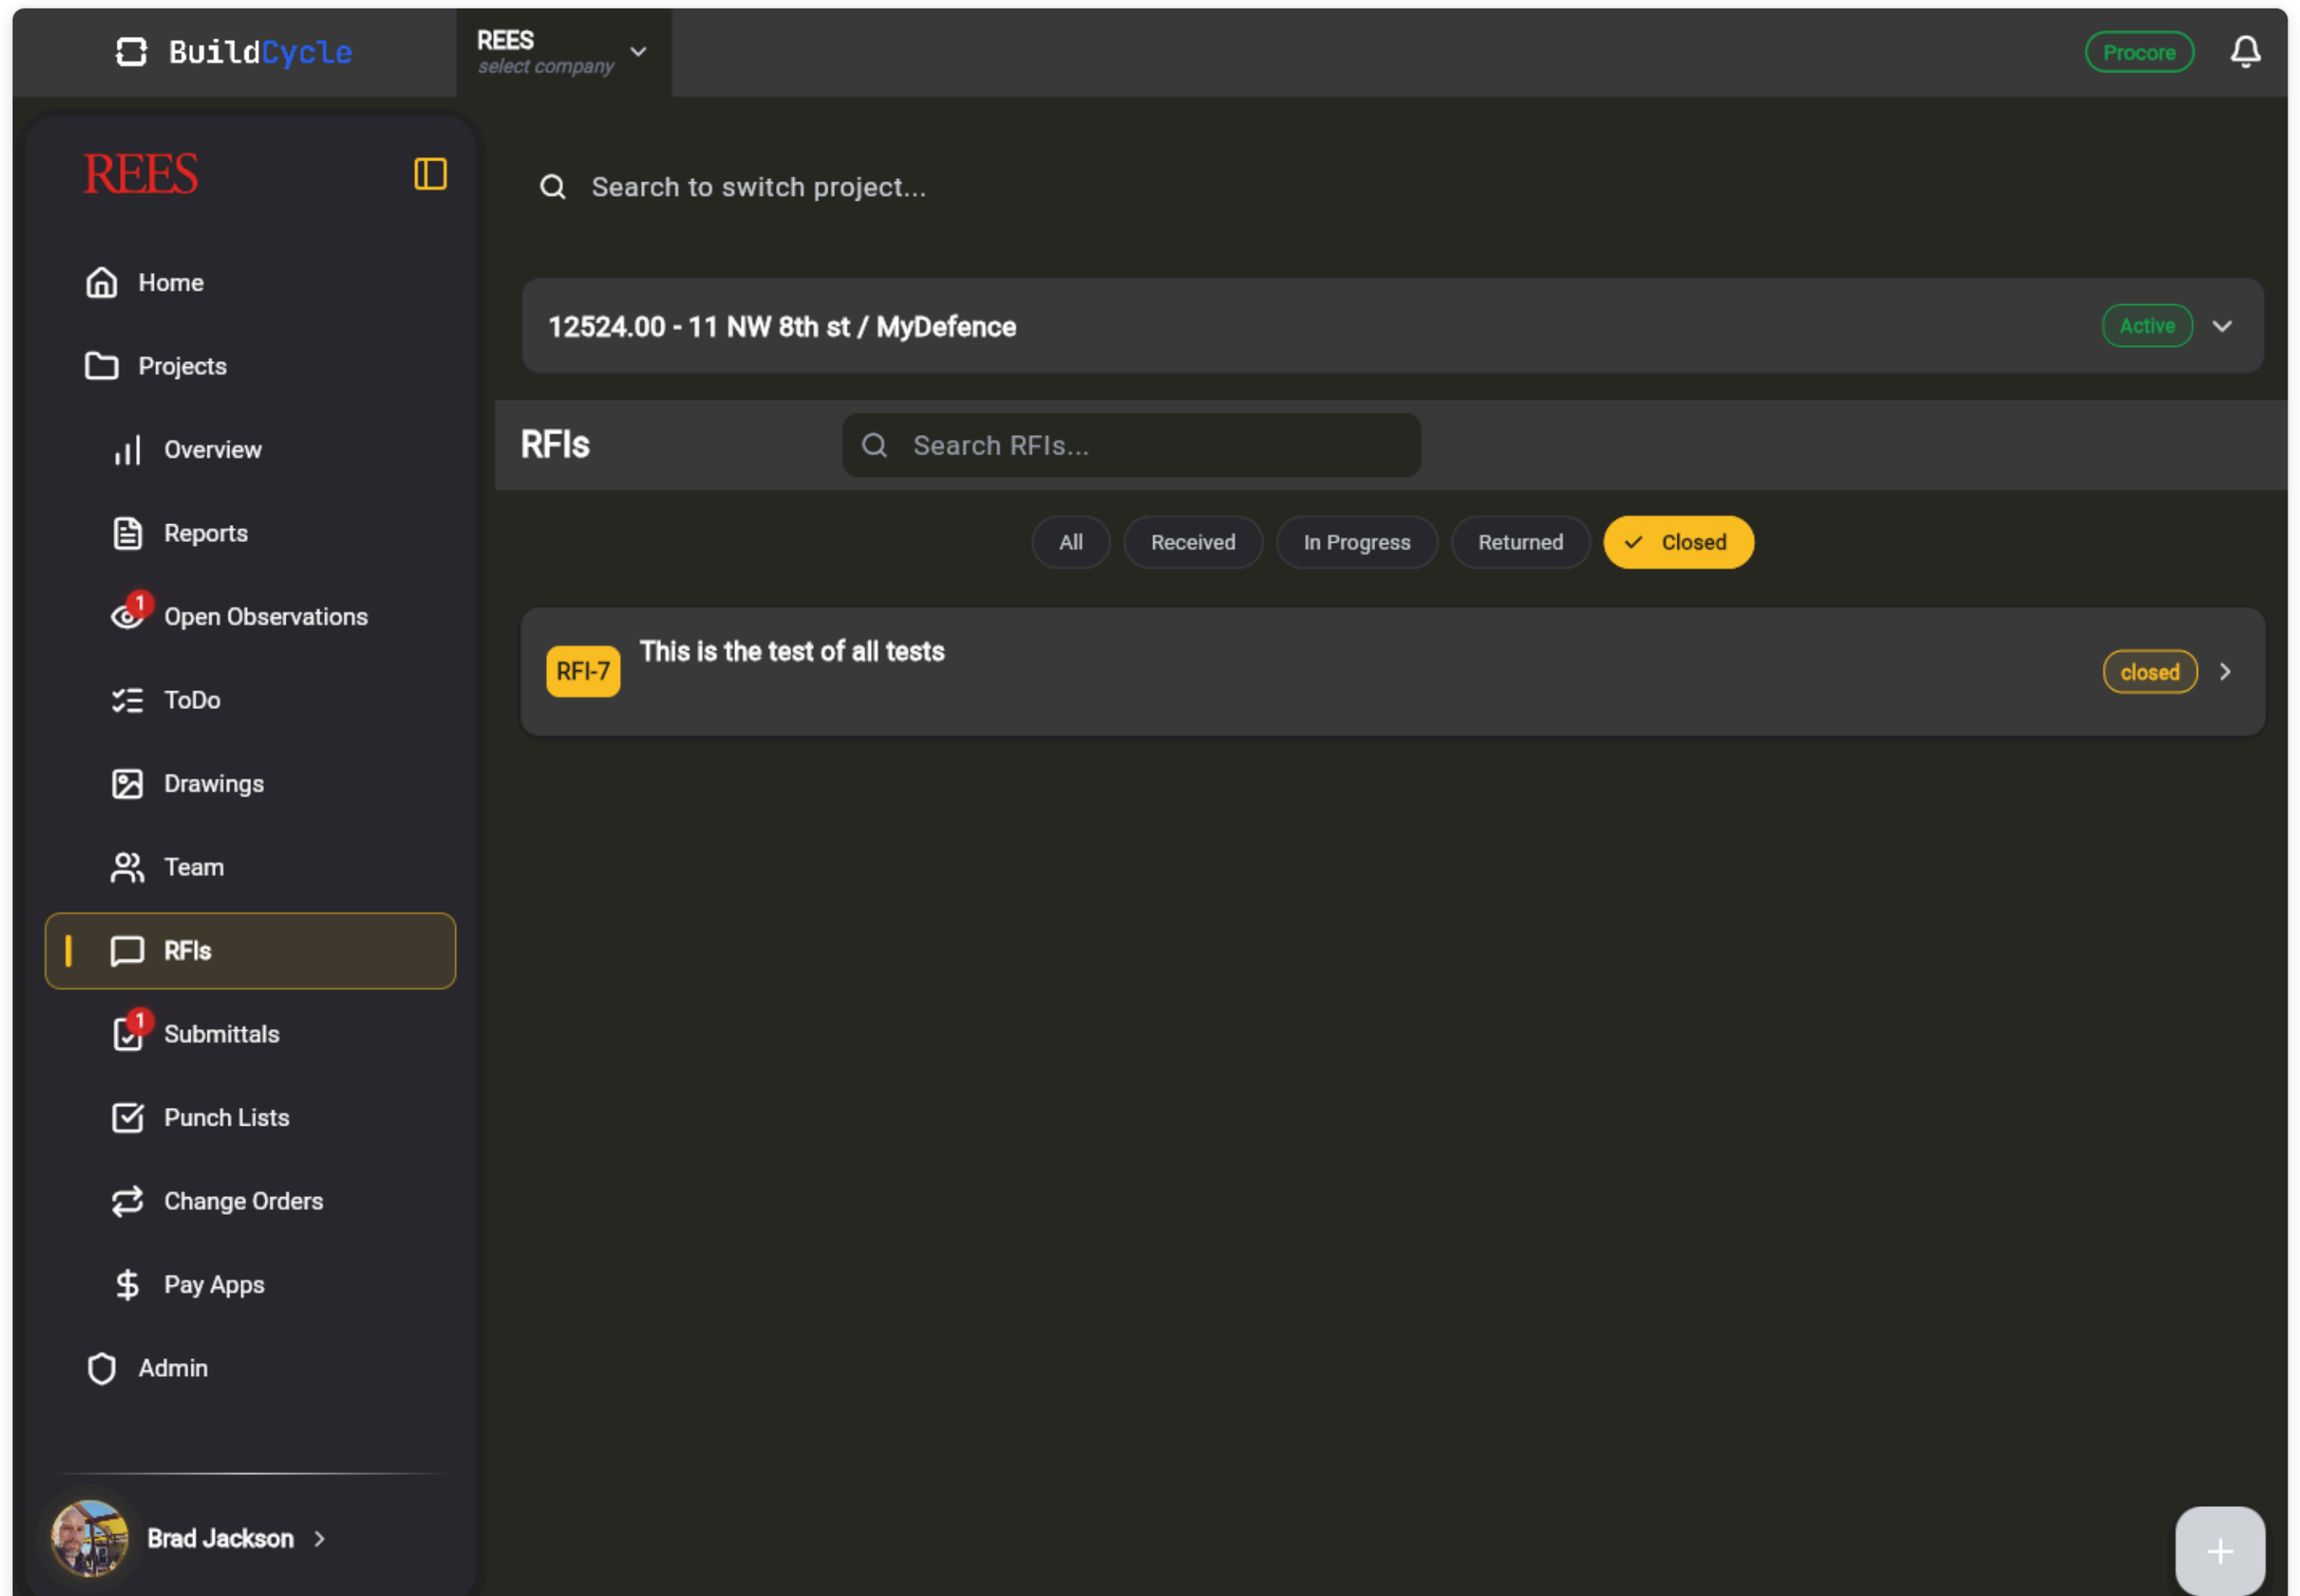

PART 1 · RFI ROUND TRIP

OAuth 2.0 connect, per project. BuildCycle shows exactly which Procore account is linked ("Connected as...") before the user selects the Procore project to pair — preventing wrong-account connections. Setup takes minutes; no middleware.

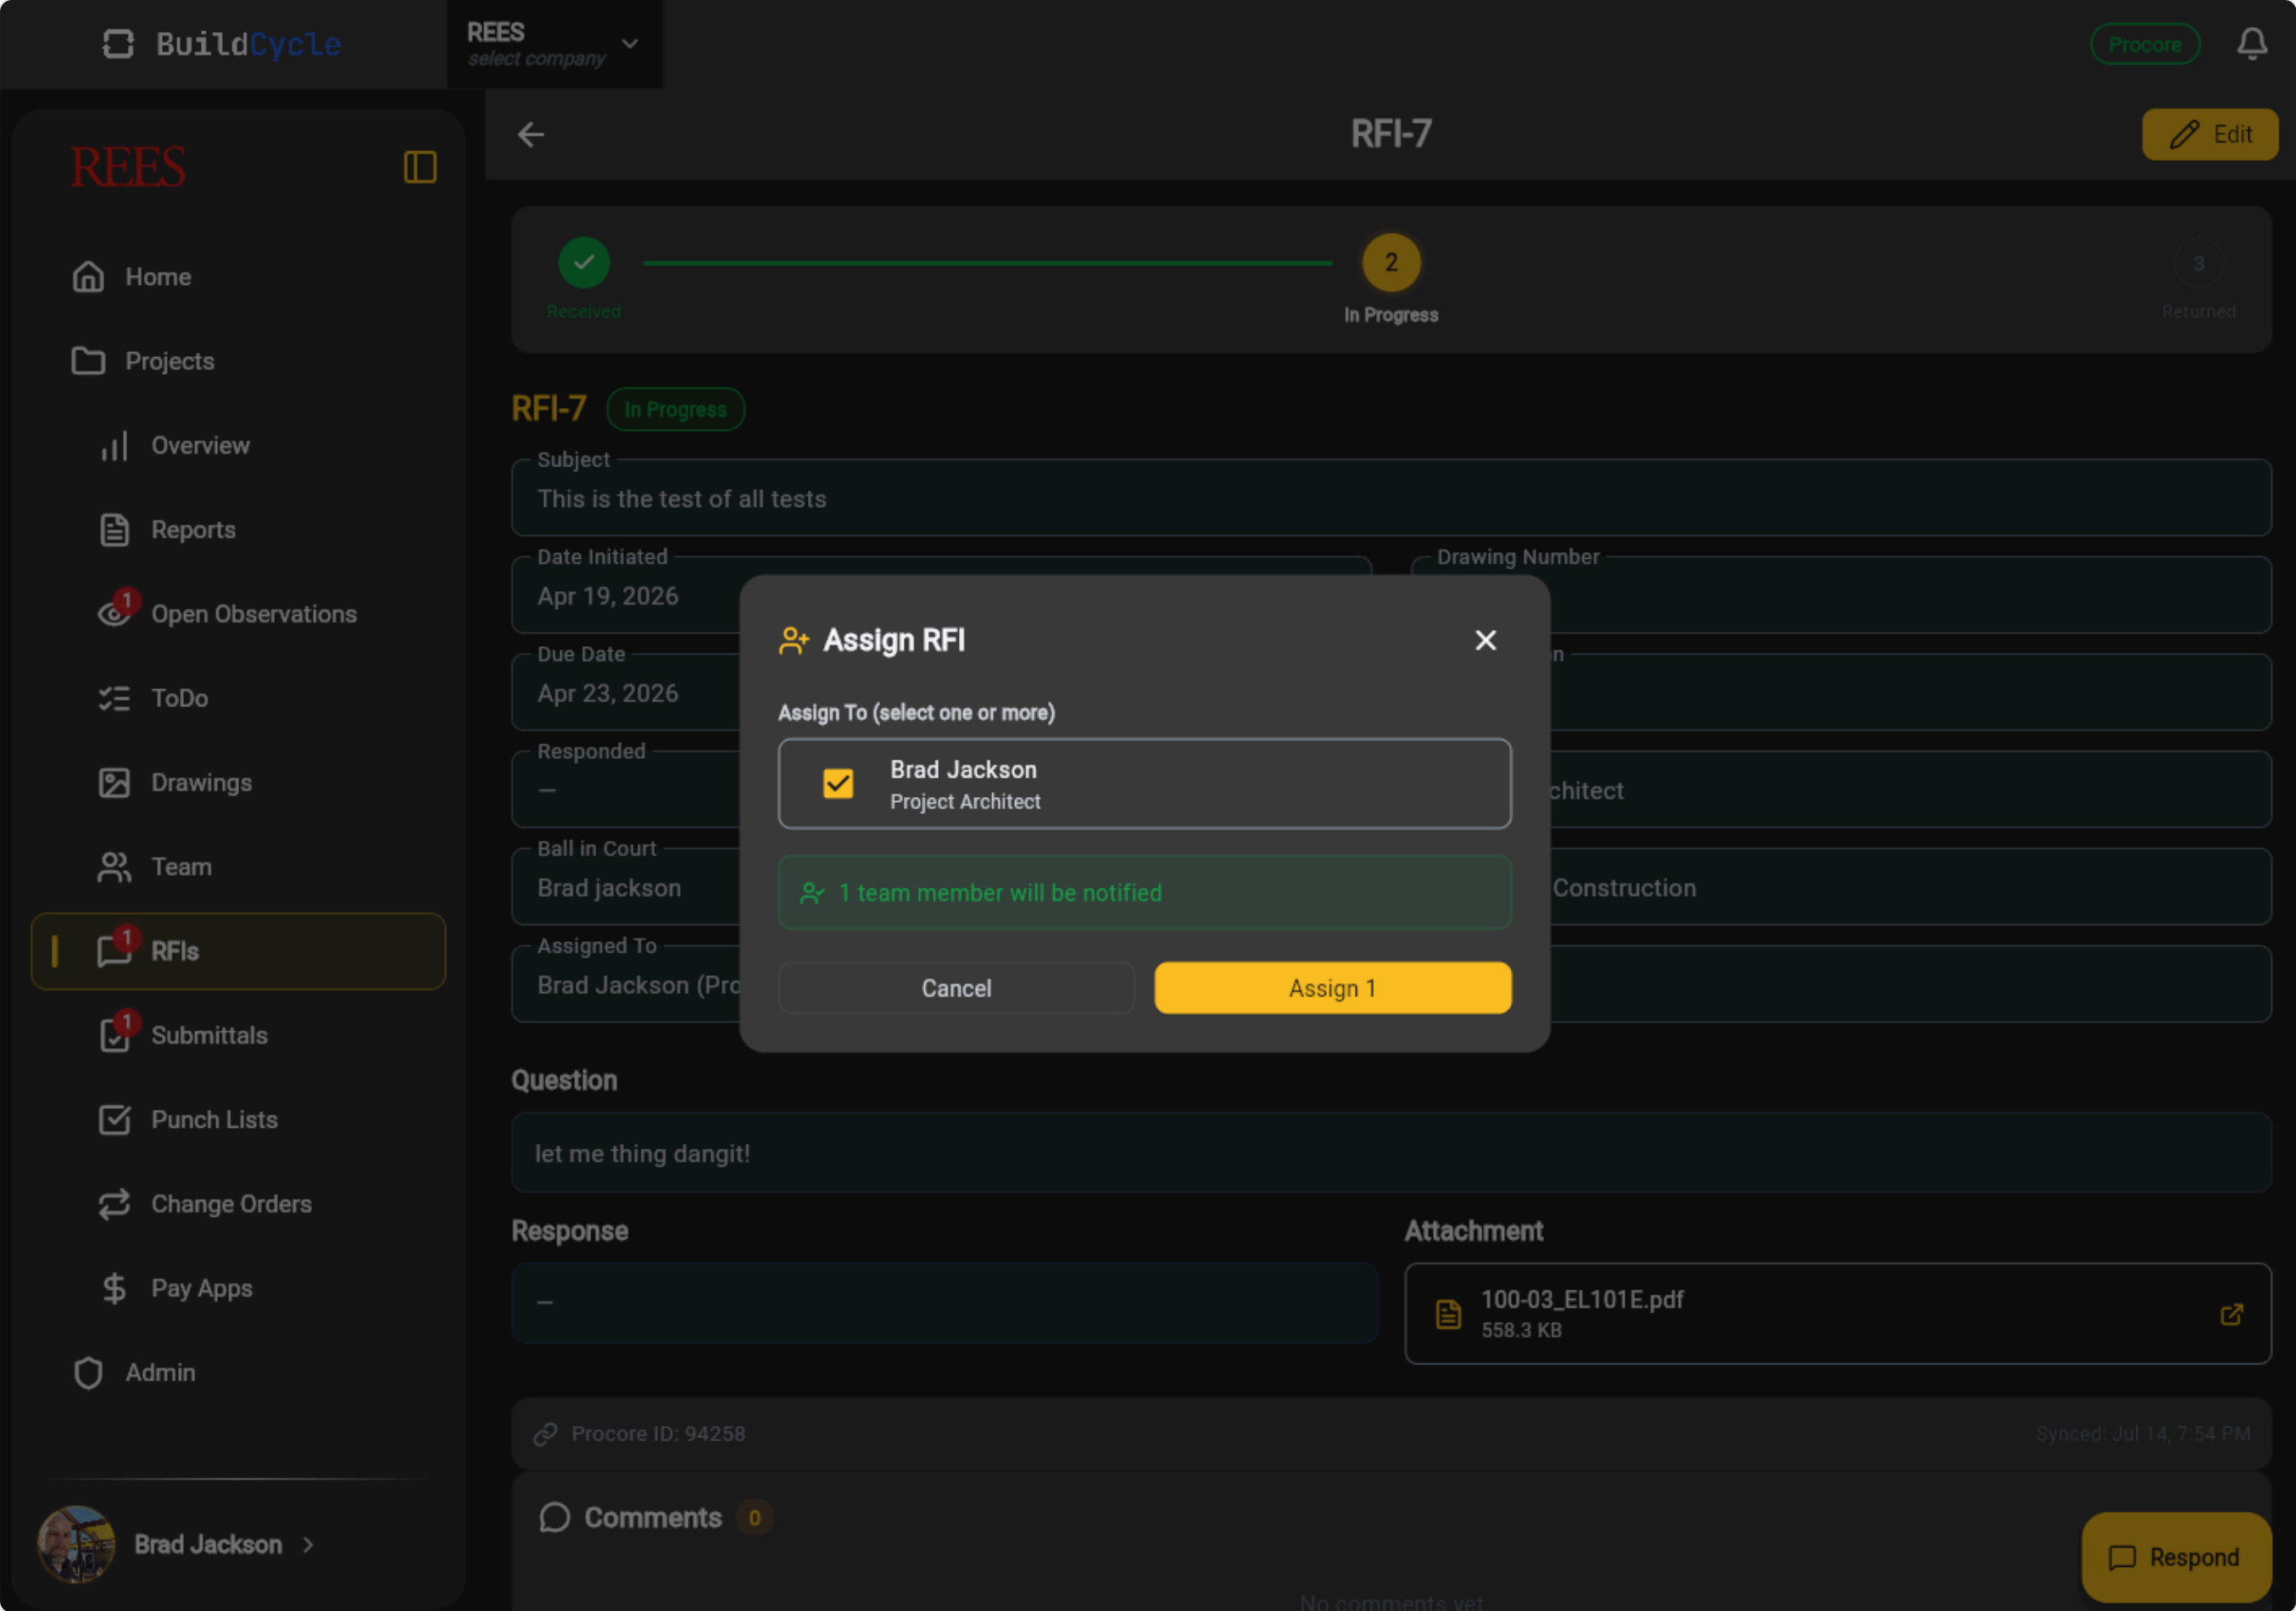

STEP 2 Procore items appear in BuildCycle

Open RFIs pull in with their attachments and approver workflows and refresh as the team works the project. The Procore badge (top right) shows the live connection; status is mirrored read-only — it stays the GC's to manage.

STEP 3 Route to the responsible reviewer

The RFI is assigned to the right team member by discipline; assignees are notified and the item lands on their ToDo list. Note the Procore ID and sync timestamp on the record — every item stays correlated to its Procore counterpart.

STEP 4 Respond once — with the file

The reviewer writes the answer and attaches the response document. On approval, BuildCycle posts it to Procore as a formal RFI reply — not a comment — with the attachment included. Written once, recorded on both sides.

The screenshot displays the BuildCycle interface for managing RFIs. On the left is a sidebar with navigation options: Home, Projects, Overview, Reports, Open Observations (1), ToDo, Drawings, Team, RFIs (1), Submittals (1), Punch Lists, Change Orders, Pay Apps, and Admin. The main area shows the details for RFI-7, which is currently in the 'In Progress' stage. A progress bar at the top indicates three steps: Received (1), In Progress (2), and Returned (3). The RFI details include a subject, date initiated (Apr 19, 2026), due date (Apr 23, 2026), and assigned to Brad Jackson. A modal dialog titled 'Respond to RFI' is open in the center, featuring a text area for optional comments (containing 'This is indeed the test to end all tests!') and an attachment section with a file named 'RFI 13 Box Culvert Substitution.pdf' (175.8 KB). The dialog has 'Cancel' and 'Respond' buttons. Below the modal, the 'Question' section shows the text 'let me thing dangit!'. The 'Response' section is currently empty. The 'Attachment' section shows a file named '100-03_EL101E.pdf' (558.3 KB). At the bottom, the 'Comments' section shows '0' comments and a 'Respond' button. The Procore ID is 94258, and the interface was synced on Jul 14, 7:54 PM.

STEP 5 The official reply, recorded in Procore

In Procore, the same RFI now carries the architect's response in its Responses section — same text, same attachment, attributed to the connected user. The GC's record stays current without anyone re-keying anything.

BuildCycle + Procore — UI Walkthrough

5 / 7

STEP 6 Submittals: a formal review action

Submittal reviews use Procore's own response vocabulary — Approved, Approved as Noted, Revise & Resubmit, Rejected — and require the marked-up file before the response can be sent, matching Procore's submittal requirements.

The screenshot displays the BuildCycle + Procore interface. On the left is a dark sidebar with navigation links: Home, Projects, Overview, Reports, Open Observations (with a red notification badge), ToDo, Drawings, Team, RFIs, Submittals (with a red notification badge), Punch Lists, Change Orders, Pay Apps, and Admin. The main content area has a top header with 'REES select company' and a 'Procore' button. Below this is a breadcrumb 'SUB-1 testing 1, 2, 3' and a progress bar with three steps: 1 Received (active), 2 In Progress, and 3 Returned. The submittal details for 'SUB-1 testing 1, 2, 3' are shown, including fields for Specification Section (09 6323-1), Due Date (May 11, 2026), Received Date, Ball in Court (Brad jackson), and Assigned To. A 'Response' section is visible below. A modal titled 'Review Submittal' is open in the center, featuring a 'Review Action' dropdown with options: Approved (green dot), Approved as Noted (blue dot), Revise & Resubmit (yellow dot), and Rejected (red dot). Below the dropdown is an 'Attachment (required)' section with a file upload area containing the text 'Drag & drop a file here, or click to browse'. At the bottom of the modal are 'Cancel' and 'Respond' buttons. The background submittal card also includes a 'Comments' section with 'No comments yet' and an 'Add a comment...' input field. A 'Respond' button is located at the bottom right of the submittal card.

STEP 7 Approver response & ball-in-court, in Procore

The response posts to the architect's approver slot in the Procore submittal workflow — with comment and file — and ball-in-court advances to the next party. Item status remains GC-owned; BuildCycle never changes it and performs no deletes.
